

Test Case:

1. Open browser, select every available game category:
 - Role-playing
 - Simulation
 - Indie
 - Racing
 - Sports
 - Action
 - Strategy
 - Shooter
 - Adventure

Check if current URL has game category name inside.
At the end of test close browser.

2. Test steps:

Program will:

- automatically open we browser (Chrome)
- iterate through every game type from menu dropdown called Genre — select every available game type from list and click on it
- check if mark X beside Genre is visible
- check if URL contains string with name of game type after every iteration

3. Expectations:

- there are available 9 games categories
- every time when game category will be selected, URL has to contain this category as string in URL, e.g. after selected role playing category URL should be like this:

[https://www.gog.com/games/role-playing?
sort=bestselling&page=1](https://www.gog.com/games/role-playing?sort=bestselling&page=1)

- after selected game category X mark beside menu dropdown Genre should be visible
- web browser will be closed after the test
